

Light footprints of landscapes

Sluneční svit je pro obyvatele Islandu v podstatě nedostatkové zboží téměř polovinu každého roku.

Účelem této měsíční práce bylo nastřádat co nejvíce slunečního svitu.

Srpen je jedním z měsíců, kdy je slunce ještě dost a proto jsem se ho rozhodla lapit ho pomocí kyanotypie.

Výsledkem je soubor 17ti otisků ze 17ti míst po celém ostrově.

Každý papír byl exponován a vyvolán na unikátním místě. K jeho expozici byly použité také předměty nalezeny ve stejném místě. To je zapsáno pomocí souřadnic společně s údaji o času (t) a UV faktoru (UVf).

Další částí byl sběr oblečení k upcyklaci. To bylo pořízeno v seconndhandu v Reykjavíku a následně jsem na něj ručně vyšila nápisy z informačních tabulí, které jsem též během cesty po ostrově nalezla. I u této práce lze najít na jednotlivých kusech oděvů souřadnice s polohou, kde se cedule nachází. Na 6ti kusech celkových 10ti kousků také lze najít kyanotypie s fotografiemi z ostrova

Poslední částí jsou otisky květin nasbírané v okolí residence.

Ty představují jen malou odbočku a připomínu léta, které je na ostrově krátké, ale plné slunečního svitu, díky kterému mohou rostliny existovat.

Sunshine is essentially a scarce commodity for Icelanders for nearly half of each year.

The purpose of this month's work was to gather as much sunlight as possible. August is one of the months when there is still enough sun and that's why I decided to catch him using a cyanotype.

The result is a set of 17 prints from 17 places all over the island.

Each paper was exposed and developed in a unique place. Objects found in the same place were also used for its exposition. This is written using coordinates along with time (t) and UV factor (UVf) data.

Another part was collecting clothes for upcycling. It was taken in seconndhand in Reykjavík and then I hand-embroidered the inscriptions from the information leaflets onto it boards, which I also found during the trip around the island. Even with this work coordinates with the location where the sign is located can be found on individual pieces of clothing. Cyanotypes can also be found on 6 pieces of a total of 10 pieces with photos from the island

The last part is prints of flowers collected around the residence. These represent just a small diversion and a reminder of the summer that is on the island short but full of sunshine that allows plants to exist.

Hætta!

Sjór fellur yfir eiðið á flóðum.  
Allir þeir sem fara um eiðið eru  
hvattir til að sýna aðgæslu  
og fylgjast vel með sjávarföllum.

Stop!

Sea falls over the oath during  
floods.

All those taking the oath  
are encouraged to exercise caution  
and pay close attention to the  
tides.

Vaðið krefst varúðar

- Hvar er vaðið?- trauvötn breyta sér.
  - Er vélín  
vatnsvarin?
  - Fylgist einhver með þér?
- Hjólfö segja ekki alla söguna.
  - Kannið sjálf vaðið.
  - Notið öryggislinu.
- Klæðist hlýjum fótum í aberandi lit.

The ford requires caution

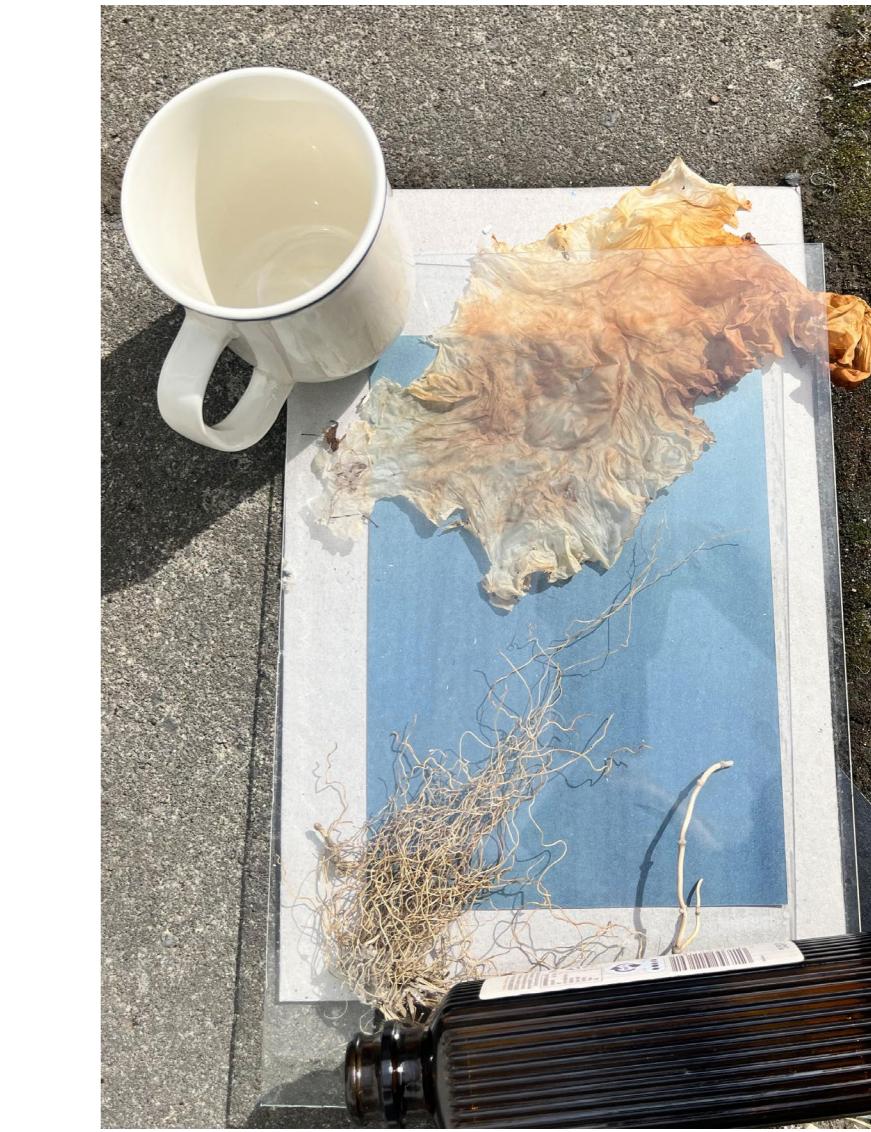

- Where is the ford?
- Is the machine  
waterproof?
- Is someone following you?
- Wheels don't tell the whole story.
  - Explore the ford yourself.
  - Use a safety line.
- Wear warm clothes in a striking  
color.
